Product Requirements Document: Noshtek Website Redesign

Executive Summary

This Product Requirements Document (PRD) defines the requirements for a complete strategic redesign of Noshtek's digital presence as an AI + SAP financial transformation boutique. The redesign will position Noshtek to compete effectively with both global consulting leaders and specialist SAP firms by combining tier-1 visual and structural discipline with the sharper narrative and proof expected of a niche financial-transformation SAP specialist[1].

Project Goals:

- Establish Noshtek as a premium AI + SAP financial transformation partner for utilities, telecom, and insurance enterprises in North America
- Create an enterprise-grade digital experience that builds trust with CFOs, CIOs, and business unit leaders
- Implement scalable information architecture and technology stack to support content growth and multi-region expansion
- Drive qualified lead generation through strategic content, conversion pathways, and thought leadership

Success Metrics:

- Improved Core Web Vitals scores (LCP < 2.5s, CLS < 0.1, INP < 200ms)
- Increased organic search visibility for target keywords (AI + SAP finance, BRIM, PaPM, IFRS 17)
- Higher conversion rates on primary CTAs (consultation requests, whitepaper downloads, webinar registrations)
- Expanded content library with 50+ insights pieces in first year

- Enhanced mobile experience with responsive design across all devices

Product Vision and Positioning

Current State Analysis

The current Noshtek site positions the firm as a "Boutique SAP Consultancy" focused on insurers, utilities, and enterprises, with emphasis on billing and revenue, and data-to-decisions use cases[1].

Current Strengths:

- Clear industry focus (insurance, utilities, telecom)
- Defined SAP product expertise (S/4HANA, BRIM/FS-CD, PaPM, TRM)
- Thematic organization around business outcomes
- Thought leadership presence with "Updates & Insights" section

Identified Gaps vs. Enterprise Expectations:

- Limited explicit AI-first narrative: AI mentioned in thought leadership but not framed as core brand pillar[1]
- Incomplete trust system: minimal analyst quotes, SAP partner certifications, or detailed client case studies[1]
- Underdeveloped information architecture: services, industries, insights present but not surfaced in scalable mega-menu structure[1]
- Visual and UX maturity: functional but lacks large-firm polish of disciplined grid, typographic hierarchy, and motion standards[1]

Target Positioning

Category: AI + SAP Financial Transformation Partner

Core Differentiation:

- Boutique, senior-led teams with deep SAP finance and billing expertise
- Focused vertical expertise in utilities, telecom, and insurance
- North American market focus with global delivery capability
- Financial-grade AI embedded within SAP processes

Positioning Planks:

1. **Financial-grade AI for SAP**: AI use cases specifically within SAP financials, BRIM, TRM, and PaPM environments
2. **Regulated industries expertise**: Utilities, telecom, and insurance as core verticals with detailed proof
3. **High-touch delivery**: Hands-on senior experts, co-delivery models, and reduced project risk
4. **Global reach with focused footprint**: North American focus supported by Asian affiliates and global experience[1]

Target Audiences

Persona	Priorities	Messaging Focus
CFO / Finance Leader	Reliability, compliance, financial close speed, liquidity visibility, regulatory demands	Faster close, stronger compliance, IFRS 17, risk management, decision-making with AI
CIO / SAP Leader	Clean core architecture, technical integration, performance, vendor relationships	S/4HANA migration, technical architecture, integration, SAP roadmap alignment
Business Unit Leader	Revenue growth, customer experience, operational agility, product innovation	Usage-based billing, customer experience, revenue optimization, profitability intelligence

Table 1: Primary target personas and messaging priorities

Information Architecture

Navigation Structure

The redesigned site will implement a scalable mega-menu navigation structure following enterprise consulting best practices observed across SAP, Deloitte, IBM, PwC, Infosys, and other leading firms[1][2][3].

Top-Level Navigation (7 items + CTA):

1. Solutions
2. Industries
3. Insights
4. Customer Stories
5. Partners
6. Company
7. Careers
8. CTA: "Talk to an SAP + AI Specialist" (persistent)

Solutions Section Structure

Parent Page: Solutions / AI + SAP Financial Transformation

Sub-Navigation:

- **Financial Transformation with SAP**
  - SAP S/4HANA Finance & Central Finance
  - SAP FPSL / TRM (Treasury & Risk Management)
  - IFRS 17 and regulatory reporting
- **Intelligent Revenue and Billing**
  - SAP BRIM / FI-CA / FS-CD
  - Subscription and usage-based billing
- **Profitability and Performance**
  - SAP PaPM (Profitability and Performance Management)
  - Analytics and SAP Analytics Cloud
- **AI for SAP Finance**
  - AI accelerators for collections, reconciliations, and forecasting
  - Data & integration foundation (BW/4HANA, Data Warehouse, BTP)

Solution Page Template Components:

- Hero section with outcome-oriented headline
- "What we do" overview
- "How we help" with specific approaches
- Detailed capabilities breakdown
- AI accelerators and technology enablers
- Featured case studies (2-3 per solution)
- Related insights and downloads
- Primary CTA: "Request consultation"

- Secondary CTA: "Download solution brief"

Industries Section Structure

Primary Industries:

- Insurance
- Utilities
- Telecom

Future Expansion Candidates: Energy, Public Sector, Financial Services

Industry Page Template Components:

- Industry-specific hero and value proposition
- Market trends and transformation pressures
- Regulatory and compliance context
- Relevant solution offerings (linked to Solutions section)
- Industry-specific case studies (2-4 per industry)
- Industry thought leadership highlights
- Expert profiles with industry specialization
- CTA: "Schedule an industry briefing"

Insights Section Structure

Content Types:

- Articles (frequent, shorter trend pieces)
- Reports (deeper, often gated content)
- Webinars (live and on-demand)
- Events
- Guides and checklists

Taxonomy and Filtering:

Facet	Values
Topic	AI, Financial Transformation, Billing & Revenue, IFRS 17, Compliance, S/4HANA
Industry	Insurance, Utilities, Telecom, Cross-Industry
SAP Product	S/4HANA Finance, BRIM, PaPM, FPSL, TRM, BW/4HANA, Analytics Cloud
Format	Article, Report, Webinar, Event, Guide, Checklist

Table 2: Content taxonomy for Insights section filtering

Insight Page Template Components:

- Article/report content with rich formatting
- Author bio with photo and links to other content
- Metadata: publish date, topic tags, estimated read time
- Related insights (algorithmically or manually curated)
- Social sharing options
- CTA: "Subscribe to insights" or "Download full report"
- Schema markup for Article structured data

Customer Stories Section Structure

Organization:

- Filterable grid layout
- Filters: Industry, Solution area, SAP product, Region, Outcome type

Case Study Page Template Components:

- Client context and background (industry, size, region)
- Business challenge with specific pain points
- Approach and solution delivered
  - Technologies implemented (SAP products, AI tools)
  - Methodologies and frameworks
  - Timeline and team structure
- Quantified outcomes and impact metrics
- Client testimonial or quote with attribution
- Visual elements: diagrams, before/after comparisons
- Related solutions and industries (cross-links)

- CTA: "Explore similar transformations" or "Discuss your challenge"

Partners Section Structure

Partner Categories:

- SAP partnership (with specific product expertise)
- Technology and delivery partners (Convista Asia, cloud providers, analytics platforms)
- Geographic subsidiaries (USA, Canada, Singapore, Taiwan)

Partner Section Components:

- Partner badges and certification logos
- SAP Pinnacle Awards and recognitions
- Co-developed offerings and joint solutions
- Partner-specific case studies
- Ecosystem overview diagram

Company Section Structure

Sub-Pages:

- About Noshtek (history, mission, AI + SAP positioning)
- Leadership & Experts (with links to authored content)
- Locations (North America focus, global affiliates)
- Careers (culture, open positions, benefits)
- ESG and corporate responsibility

Careers Section Structure

Components:

- Culture and values overview
- Employee testimonials and day-in-the-life stories
- Open positions (filterable by location, role type, experience level)
- Benefits and professional development
- Application process and timeline
- CTA: "View open positions" or "Join our team"

User Experience and Design Requirements

Homepage Design

The homepage will function as a scroll-based narrative that compresses Noshtek's full value proposition into a structured, scannable story following best practices from premium consulting sites[4][5].

Homepage Section Sequence:

1. **Hero Section**
    - Headline: AI + SAP financial transformation positioning
    - Subhead: Explanation of Noshtek's role in modernizing billing, finance, and profitability
    - Industry badges: Utilities, Telecom, Insurance
    - Primary CTA: "Talk to an expert"
    - Secondary CTA: "View customer stories"
    - Hero visual: Abstract financial/data visualization or high-quality industry imagery
2. **Value Pillars (3-4 cards)**
    - Modernize your financial core
    - Transform billing and revenue
    - Unlock profitability intelligence
    - Embed AI into every decision
3. **Industry Focus**
    - Three-column grid with industry tiles
    - Each tile: industry name, key challenge, relevant solutions, "Learn more" link
4. **Featured Customer Stories**
    - 2-4 highlighted case studies
    - Card format with client logo, industry, challenge, outcome metrics
    - CTA: "Explore all customer stories"
5. **Thought Leadership Highlights**
    - Latest insights carousel or grid
    - 3-4 featured articles/reports with thumbnails, titles, summaries
    - CTA: "View all insights"

6. **Trust and Credibility**
    - SAP partner badges and certifications
    - Analyst recognitions (if available)
    - Client logos organized by industry
    - Geographic presence map
7. **Partner Ecosystem**
    - Strategic alliance logos (SAP, cloud providers, analytics platforms)
    - Brief partnership value statement
    - CTA: "Learn about our partnerships"
8. **Closing CTA Section**
    - Strong value statement
    - Multiple conversion pathways: "Request consultation", "Download insights", "Subscribe to newsletter"

Visual Design System

Color Palette:

- Primary: Deep navy or charcoal (authority, trust)
- Accent 1: Bright teal or electric blue (innovation, AI)
- Accent 2: Warm orange or amber (energy, transformation)
- Neutral: White, light gray, mid gray for backgrounds and text
- Semantic: Green (success), red (alert), amber (warning) for UI states

Typography Scale:

Element	Size	Usage
Hero Headline	48-64px	Homepage hero, major landing pages
H1	40-48px	Page titles
H2	32-36px	Major section headings
H3	24-28px	Sub-section headings
H4	20-22px	Card titles, component headings
Body Large	18px	Intro paragraphs, important body text
Body	16px	Standard body text
Small	14px	Captions, metadata, labels

Table 3: Typography scale with usage guidelines

Typography Guidelines:

- Font pairing: Modern sans-serif for headings (e.g., Inter, Proxima Nova, Montserrat), highly legible sans-serif for body (e.g., Open Sans, Source Sans Pro)
- Line height: 1.5-1.6 for body text, 1.2-1.3 for headings
- Generous whitespace around text blocks
- Maximum line length: 70-80 characters for optimal readability

Layout and Grid System:

- 12-column responsive grid system
- Consistent margins and gutters (16px mobile, 24px tablet, 32px desktop)
- Modular, reusable components
- Clear vertical rhythm with consistent spacing scale (8px base unit: 8, 16, 24, 32, 48, 64, 96px)
- Wide margins and generous whitespace
- Asymmetric layouts for visual interest while maintaining structural discipline[4]

Motion and Animation Principles:

- Subtle, purposeful animations that enhance rather than distract
- Scroll-triggered fade-ins and parallax effects for hero sections
- Micro-interactions on cards, buttons, and navigation elements
- Kinetic typography for key AI and innovation messaging[4]
- Performance-conscious animations using GPU-friendly properties (transform, opacity)
- Respect user motion preferences (prefers-reduced-motion)

Illustration and Photography:

- Blend of authentic photography (experts, clients, workplaces) with artful illustrations
- Custom data visualizations and diagrams for SAP architecture and AI workflows
- Avoid generic stock photography; when used, apply brand-specific color grading
- High-quality, optimized images (WebP/AVIF formats)[4][6]

Component Library

Core Components Required:

- **Navigation**
  - Mega menu with multi-column dropdowns
  - Mobile hamburger menu with accordion sub-navigation
  - Persistent CTA button in header
  - Sticky header on scroll
- **Hero Sections**
  - Full-width hero with background image/video
  - Split hero (50/50 content and visual)
  - Centered hero with icon/illustration
- **Content Cards**
  - Insight card (thumbnail, title, summary, metadata, CTA)
  - Case study card (logo, industry, metrics, CTA)
  - Solution card (icon, title, description, CTA)
  - Industry card (image, title, challenge statement, CTA)
- **CTAs and Forms**
  - Primary button (solid background, high contrast)
  - Secondary button (outlined or ghost style)
  - Text link with icon
  - Contact forms (short lead capture and detailed inquiry)
  - Newsletter signup
  - Gated content download forms
- **Content Modules**
  - Two-column text + image
  - Three-column feature grid
  - Logo wall/client showcase
  - Testimonial block with attribution
  - Statistics/metrics display
  - Accordion/collapsible sections
  - Tabs for content organization
- **Navigation Aids**
  - Breadcrumbs
  - In-page sticky sub-navigation
  - "Back to top" button
  - Related content recommendations
- **Trust Elements**

  - Partner badge grid
  - Award/certification display
  - Client logo showcase (filterable by industry)
  - Expert bio card with photo and social links

Accessibility Requirements

WCAG 2.1 AA Compliance:

- Color contrast ratios: 4.5:1 for normal text, 3.1:1 for large text
- Keyboard navigation support for all interactive elements
- Focus indicators clearly visible
- Semantic HTML structure with proper heading hierarchy
- ARIA attributes where appropriate (aria-label, aria-describedby)
- Alternative text for all meaningful images
- Transcripts or captions for video content
- Forms with properly associated labels
- Skip navigation links for screen readers

Responsive Design Requirements

Breakpoints:

- Mobile: 320-767px
- Tablet: 768-1023px
- Desktop: 1024-1439px
- Large Desktop: 1440px+

Mobile-Specific Considerations:

- Simplified navigation (hamburger menu)
- Touch-friendly tap targets (minimum 44x44px)
- Stacked layouts for multi-column content
- Optimized images for smaller viewports
- Condensed typography scale
- Reduced motion and animations for performance

Technical Requirements

Technology Stack Recommendation

Based on research into enterprise consulting websites and performance best practices[7][8][9], the recommended technology stack prioritizes Core Web Vitals, SEO control, scalability, and enterprise governance.

Frontend Framework:

Primary Recommendation: Astro

- Content-focused "islands architecture" with zero-JavaScript-by-default
- Superior Core Web Vitals performance (2-3x better than Next.js on static content)[7]
- Significantly lower JavaScript bundles and faster FCP/LCP[8]
- Excellent for marketing and content-heavy sites
- Supports component frameworks (React, Vue, Svelte) for interactive islands

Alternative: Next.js

- React-based framework with hybrid rendering (SSG, SSR, ISR)
- Better suited for complex interactivity and personalization
- Larger ecosystem and more mature tooling
- Higher JavaScript overhead but more flexible for dynamic features[7]

Headless CMS:

Primary Recommendation: Contentful or Sanity

Platform	Strengths	Best For
Contentful	Enterprise-grade, global CDN, mature APIs, robust roles/permissions, composable architecture	Teams prioritizing stability, enterprise governance, multi-region delivery[9][10]
Sanity	Highly customizable content lake, real-time collaboration, flexible schemas, strong developer experience	Teams investing in bespoke content models and workflows, needing real-time updates[9][10]
Strapi	Open-source, REST and GraphQL APIs, self-hosting option, data ownership	Organizations requiring on-premises hosting, custom infrastructure, lower licensing costs[10][11]

Table 4: Headless CMS comparison for Noshtek requirements

Recommended Choice: Contentful for enterprise-grade stability, scalability, and North American/global CDN performance[9].

Alternative No-Code Option: Webflow

- All-in-one hosted visual builder with integrated CMS
- Strong for marketing team autonomy
- Good performance and SEO controls
- May be restrictive for highly custom AI-driven experiences and deep integrations
- Consider if internal development capacity is limited[12]

Hosting and Deployment:

- **Vercel** (if using Next.js) or **Netlify** (if using Astro)
- Global CDN with edge caching
- Serverless functions for API endpoints and form handling
- Preview deployments for staging and QA
- Automatic SSL/TLS certificates

Additional Infrastructure:

- **Analytics:** Google Analytics 4 + custom event tracking for CTA interactions
- **Tag Management:** Google Tag Manager for marketing scripts
- **SEO Tools:** Ahrefs or SEMrush for keyword research and competitive monitoring
- **Performance Monitoring:** Lighthouse CI, Core Web Vitals monitoring
- **Forms and CRM Integration:** HubSpot, Salesforce, or Marketo integration for lead capture
- **Search:** Algolia or native CMS search with custom UI

Content Model Structure

The CMS content model must support scalable, structured content with consistent taxonomies for enterprise SEO and cross-linking[13][14].

Primary Content Types:

- **Solution**
  - Title, slug, meta description
  - Hero section (headline, subhead, image)
  - Overview (rich text)
  - Capabilities (repeatable structured blocks)
  - AI accelerators (repeatable blocks)
  - Related case studies (references)
  - Related insights (references)
  - CTAs (structured)
  - Taxonomy: Solution category, SAP products, industries served
- **Industry**
  - Title, slug, meta description
  - Hero section
  - Market trends and challenges (rich text)
  - Relevant solutions (references)
  - Case studies (references)
  - Thought leadership (references)
  - Experts (references)
  - CTAs
- **Insight**

  - Title, slug, meta description
  - Content type (Article, Report, Webinar, Event, Guide)
  - Publish date, updated date
  - Author(s) (references to Expert content type)
  - Featured image
  - Body content (rich text with embedded media)
  - Gated content flag and download URL
  - Related insights (references)
  - Taxonomy: Topics, industries, SAP products, content format
- **Customer Story / Case Study**
  - Title, slug, meta description
  - Client name and logo (optional for confidential projects)
  - Industry (reference)
  - Solutions used (references)
  - Challenge (rich text)
  - Approach (rich text)
  - Outcomes (structured: metric, value, description)
  - Testimonial quote with attribution
  - Visual assets (diagrams, screenshots)
  - Related solutions and industries (references)
- **Expert / Author**
  - Name, title, slug
  - Bio (short and long versions)
  - Photo
  - Expertise areas (taxonomy)
  - Social links (LinkedIn, Twitter, etc.)
  - Authored insights (back-references)
  - Related case studies (back-references)
- **Partner**
  - Name, logo, slug
  - Partner type (SAP, Technology, Delivery, Geographic)
  - Description (rich text)
  - Partnership details and certifications
  - Co-developed solutions
  - Related case studies
- **Global Elements**
  - Navigation structure
  - Footer content

  - CTA blocks (reusable across pages)
  - Announcement banners

Performance Requirements

Core Web Vitals Targets:

Metric	Target	Implementation Strategy
Largest Contentful Paint (LCP)	< 2.5 seconds	Image optimization (WebP/AVIF), critical CSS inlining, CDN caching, lazy loading
Interaction to Next Paint (INP)	< 200ms	Minimal JavaScript, code splitting, efficient event handlers, web workers for heavy tasks
Cumulative Layout Shift (CLS)	< 0.1	Explicit image dimensions, reserved space for embeds, careful font loading, stable layouts

Table 5: Core Web Vitals targets and implementation strategies[13] [15]

Additional Performance Requirements:

- Lighthouse Performance Score: 90+ (desktop), 80+ (mobile)
- First Contentful Paint (FCP): < 1.5 seconds
- Time to Interactive (TTI): < 3.5 seconds
- Total Blocking Time (TBT): < 300ms
- Page weight: < 2MB total (including images, scripts, fonts)
- Number of HTTP requests: < 50 per page

Image Optimization:

- Modern formats: WebP with AVIF fallback
- Responsive images with srcset
- Lazy loading for below-fold images
- Compression without quality loss (80-85% quality)
- Maximum dimensions: 2400px width for hero images, 1200px for content images

Font Loading:

- Self-hosted fonts preferred over external CDNs
- Font subsetting to include only required character sets
- Font-display: swap for web font loading
- Preload critical fonts

SEO and Structured Data Requirements

Technical SEO Baseline:

- XML sitemap with priority and change frequency
- Robots.txt configuration
- Canonical tags on all pages
- Consistent URL structure and patterns
- HTTPS enforcement
- 301 redirects from old site structure to new
- Mobile-responsive design (mobile-first indexing)
- Clean, semantic HTML structure

Schema.org Structured Data:

Required schema types to implement[14][16]:

- **Organization schema** (site-wide)
  - Name, logo, contact information
  - Social media profiles
  - Founding date and location
- **WebSite schema**
  - Site name and URL
  - Search action for site search
- **BreadcrumbList schema**
  - Hierarchical navigation path
  - Implemented on all interior pages
- **Article schema** (Insights pages)
  - Headline, author, publish date, modified date
  - Featured image
  - Article body
- **Service schema** (Solution pages)
  - Service name and description
  - Provider (Organization)
  - Service type and category

    - Areas served
- **FAQPage schema** (where applicable)
    - Question and answer pairs
    - Particularly useful on solution and industry pages
- **JobPosting schema** (Careers pages)
    - Job title, description, location
    - Employment type
    - Posting date and expiry

On-Page SEO Requirements:

- Unique, descriptive title tags (50-60 characters)
- Compelling meta descriptions (150-160 characters)
- Proper heading hierarchy (H1 → H2 → H3)
- Descriptive, keyword-rich URLs
- Internal linking strategy with descriptive anchor text
- Alt text for all images
- Open Graph and Twitter Card metadata

Content Taxonomy and Tagging:

- Consistent taxonomy for Solutions, Industries, SAP Products, Topics
- Tag management for Insights content
- Related content algorithms based on shared taxonomy
- Faceted filtering on Insights and Customer Stories sections

Integration Requirements

Third-Party Integrations:

Integration	Purpose	Implementation
HubSpot / Salesforce	CRM and lead management	Form submissions, contact data sync, lead scoring
Google Analytics 4	Analytics and conversion tracking	Event tracking for CTAs, downloads, page views
Google Tag Manager	Marketing script management	Container for marketing pixels and tags
Mailchimp / HubSpot	Email marketing and newsletters	Newsletter signup forms, audience segmentation
LinkedIn Insight Tag	B2B advertising tracking	Conversion tracking for LinkedIn campaigns
Calendly / HubSpot Meetings	Consultation scheduling	Embedded scheduling for "Talk to an expert" CTA

Table 6: Required third-party integrations

API Requirements:

- RESTful or GraphQL APIs for CMS content delivery
- Webhooks for content publish/unpublish events
- Form submission API endpoints
- Newsletter subscription API
- Contact form to CRM integration

Security Requirements

Baseline Security Measures:

- HTTPS/TLS encryption (minimum TLS 1.2)
- Content Security Policy (CSP) headers
- HTTP security headers (X-Frame-Options, X-Content-Type-Options, Referrer-Policy)
- Regular dependency updates and vulnerability scanning
- DDoS protection via CDN
- Rate limiting on form submissions
- Input validation and sanitization

- GDPR-compliant cookie consent management
- Privacy policy and terms of service pages

CMS Security:

- Role-based access control (RBAC)
- Multi-factor authentication (MFA) for admin users
- Audit logging for content changes
- Granular publishing permissions
- Content versioning and rollback capability

Content Strategy

Content Pillars

The content strategy will organize thought leadership around four core pillars aligned to Noshtek's positioning[17][18]:

1. **AI + SAP Finance Modernization**
    - AI-enabled financial close and reconciliation
    - Predictive forecasting and planning
    - Intelligent anomaly detection
    - AI governance for financial systems
    - SAP Business AI integration patterns
2. **Billing and Revenue Transformation**
    - Usage-based and subscription billing models
    - SAP BRIM/FI-CA/FS-CD implementation
    - Revenue assurance and leakage prevention
    - Customer experience in billing
    - AI-enhanced collections and dunning
3. **Regulatory and Accounting Transformation**
    - IFRS 17 compliance for insurers
    - BEPS 2.0 and transfer pricing
    - ESG reporting frameworks
    - Treasury and risk management (SAP FPSL/TRM)
    - Regulatory technology integration
4. **Profitability and Performance Intelligence**
    - SAP PaPM implementation
    - Profitability modeling and allocation
    - Analytics and visualization (SAP Analytics Cloud)

- Performance management frameworks
- Data-driven decision-making

Content Formats and Cadence

Recommended Content Production Schedule:

Content Type	Frequency	Typical Length
Blog Articles	2-4 per month	800-1500 words
Deep-Dive Reports	Quarterly	3000-5000 words
Case Studies	1-2 per quarter	1000-1500 words
Webinars	Monthly	45-60 minutes
Whitepapers	2-3 per year	2500-4000 words
Guides/Checklists	Bi-monthly	1500-2000 words
Newsletter	Weekly or bi-weekly	500-800 words

Table 7: Content production schedule and formats

Content Ideation and Planning

AI-Assisted Topic Strategy:

- Use AI-driven topic intelligence tools to identify emerging themes and competitive gaps[18][19]
- Analyze search intent and keyword opportunities for high-value enterprise queries
- Monitor industry publications, regulatory updates, and SAP product roadmaps
- Track competitor content to identify whitespace opportunities

Editorial Workflow:

1. **Ideation**: Quarterly planning sessions with subject matter experts
2. **Prioritization**: Score topics by search demand, competitive advantage, sales alignment
3. **Assignment**: Match topics to internal experts or external contributors
4. **Creation**: Draft content with subject matter expert input

5. **Review**: Technical review by SAP/AI experts, editorial review for clarity and brand voice
6. **SEO Optimization**: Keyword integration, meta data, internal linking
7. **Publication**: Schedule and publish with appropriate taxonomy and cross-links
8. **Promotion**: Share via newsletter, social media, sales enablement
9. **Performance Tracking**: Monitor traffic, engagement, conversions

Expert-Centric Content Model

Building Visible Experts:

- Create comprehensive expert profiles linked to all authored content[14]
- Feature experts in webinars, podcasts, and video content
- Encourage experts to maintain active LinkedIn presence with content sharing
- Develop signature frameworks and methodologies associated with specific experts
- Showcase expert credentials, certifications, and speaking engagements

Content Attribution:

- All insights content must have clear author attribution
- Expert bios appear on each article with photo and social links
- Dynamic "More from this author" sections on insight pages
- Expert landing pages aggregating all content, case studies, and speaking engagements

Gated Content Strategy

Lead Generation Through Content:

Gated Content (requires form submission):

- Comprehensive whitepapers and research reports
- Industry benchmark studies
- Detailed implementation guides

- Toolkits and templates (e.g., "S/4HANA Finance Migration Checklist")
- Recorded webinars and workshop materials

Ungated Content (freely accessible):

- Blog articles and shorter insights
- Case study summaries
- Expert commentary and opinion pieces
- Newsletter archives
- Event announcements

Form Strategy:

- Short forms for high-value gated content (Name, Email, Company, Role)
- Progressive profiling for repeat visitors
- Clear value proposition ("Download the IFRS 17 Implementation Guide")
- Privacy policy link and consent checkbox
- Immediate delivery via email with thank-you page

Conversion Strategy and Lead Generation

Conversion Pathway Mapping

The website must support multi-stage buyer journeys with appropriate CTAs for each phase[20][21].

Awareness Stage:

- **Primary Goal:** Build brand awareness and establish expertise
- **CTAs:**
  - "Subscribe to AI + SAP Finance Insights" newsletter
  - "Follow us on LinkedIn"
  - "Explore our solutions"
  - "View customer stories"
- **Content:** Thought leadership articles, trend reports, educational content

Consideration Stage:

- **Primary Goal:** Demonstrate capabilities and build trust
- **CTAs:**
  - "Download [specific guide/whitepaper]"
  - "Watch on-demand webinar"
  - "Register for upcoming webinar"
  - "View related case studies"
- **Content:** Detailed solution pages, industry-specific content, case studies, whitepapers

Decision Stage:

- **Primary Goal:** Drive qualified consultation requests
- **CTAs:**
  - "Request a consultation"
  - "Schedule a 30-minute SAP finance assessment"
  - "Talk to an SAP + AI specialist"
  - "Request a custom demo"
- **Content:** ROI calculators, detailed case studies, customer testimonials, expert profiles

CTA Strategy and Placement

Primary CTAs (Consultation/Contact):

- Persistent in header navigation: "Talk to an Expert"
- Hero section of homepage and major landing pages
- End of each solution and industry page
- Conclusion of thought leadership pieces
- Dedicated contact page with multiple contact options

Secondary CTAs (Content Downloads):

- Contextual within relevant solution pages
- Insights detail pages with related gated content
- Sidebar or footer of blog articles
- Dedicated resources/downloads page

Tertiary CTAs (Newsletter/Social):

- Footer of all pages
- End of blog articles
- Dedicated subscription landing page

CTA Copywriting Best Practices:

- Specific value propositions: "Get a 30-minute SAP finance modernization assessment" vs. generic "Contact us"[20]
- Action-oriented language: "Schedule," "Download," "Request," "Explore"
- Create urgency where appropriate: "Register for webinar - Limited seats"
- A/B test variations for optimization

Lead Capture Forms

Form Field Strategy:

\begin{table}

Form Type	Fields	Purpose
Newsletter Signup	Email, First Name	Low-friction nurture opt-in
Content Download	First Name, Last Name, Email, Company, Job Title	Mid-funnel lead capture
Consultation Request	Full contact info, Company size, Challenge description, Timeline	High-intent lead qualification
Webinar Registration	Name, Email, Company, Job Title, Phone (optional)	Event attendance and follow-up

\end{table>

Form UX Requirements:

- Clear, descriptive field labels
- Inline validation with helpful error messages
- Required field indicators
- Privacy policy link and consent checkbox (GDPR compliance)
- Clear submission confirmation
- Thank-you page with next steps
- Immediate email confirmation

Lead Nurture and Follow-Up

Automated Email Sequences:

- **Newsletter Subscriber Sequence**
  1. Welcome email with top resources
  2. Weekly/bi-weekly newsletter with curated insights
  3. Occasional promoted webinars and gated content offers
- **Content Download Sequence**
  1. Immediate delivery of requested content
  2. Follow-up (3 days): Related case study or insight
  3. Follow-up (7 days): Invitation to webinar or consultation
  4. Follow-up (14 days): Additional related resources
- **Webinar Attendee Sequence**
  1. Immediate: Recording and presentation slides
  2. Follow-up (2 days): Related resources and next webinar
  3. Follow-up (5 days): Consultation offer from expert
- **Consultation Request**
  1. Immediate: Confirmation and next steps
  2. Manual follow-up within 24 hours from sales team
  3. Calendar invitation for scheduled meeting

Sales Enablement:

- Lead scoring based on engagement (downloads, webinar attendance, page visits)
- Lead routing rules (by industry, solution interest, company size)
- CRM integration for centralized lead management
- Sales alerts for high-intent activities (pricing page visits, multiple case study views)
- Content library for sales team (one-pagers, pitch decks, case studies)

Implementation Roadmap

Phase 1: Discovery and Planning (Weeks 1-4)

Activities:

- Stakeholder interviews and requirements gathering
- Content audit of existing site

- Competitive analysis review
- User persona refinement
- Information architecture finalization
- Content model design
- Technology stack selection and vendor evaluation
- Project timeline and resource allocation

Deliverables:

- Final PRD (this document)
- Information architecture diagram
- Content model documentation
- Technology stack recommendation report
- Project plan and timeline

Phase 2: Design and Content Strategy (Weeks 5-10)

Activities:

- Visual design system development
- Component library creation
- Homepage and key template designs (desktop and mobile)
- Content strategy documentation
- Editorial calendar creation
- SEO keyword research and strategy
- Conversion pathway mapping

Deliverables:

- Design system documentation
- High-fidelity mockups for homepage and 8-10 key templates
- Component library (Figma or Sketch)
- Content strategy and editorial plan
- SEO strategy document
- Conversion optimization plan

Phase 3: Technical Setup and Development (Weeks 11-18)

Activities:

- Frontend framework setup (Astro or Next.js)
- Headless CMS configuration (Contentful or Sanity)
- Content model implementation
- Component development
- Template development
- API integrations (CRM, analytics, forms)
- Performance optimization
- Accessibility testing and fixes

Deliverables:

- Fully functional staging environment
- Component library in code
- All page templates implemented
- CMS authoring environment configured
- Integration testing completed

Phase 4: Content Migration and Creation (Weeks 15-20, parallel with Phase 3)

Activities:

- Existing content audit and prioritization
- Content migration from old site
- New content creation (priority pages)
- Image optimization and media library setup
- SEO metadata for all pages
- Internal linking implementation
- Author/expert profile creation

Deliverables:

- All migrated content in new CMS
- Priority new content created (10+ insights, 5+ case studies)
- Complete media library
- SEO metadata spreadsheet

- Content governance documentation

Phase 5: QA, Testing, and Refinement (Weeks 21-24)

Activities:

- Cross-browser and device testing
- Performance testing and optimization
- Accessibility audit (WCAG 2.1 AA)
- SEO technical audit
- Security testing
- User acceptance testing (UAT) with stakeholders
- Bug fixes and refinements
- Content review and final approvals
- Analytics and tracking verification

Deliverables:

- QA test reports
- Performance audit results (Lighthouse scores, Core Web Vitals)
- Accessibility audit report
- SEO checklist completion
- UAT sign-off

Phase 6: Launch Preparation (Weeks 25-26)

Activities:

- DNS and hosting configuration
- 301 redirect mapping and implementation
- SSL certificate setup
- Analytics and tracking final verification
- Search engine submission
- Monitoring and alerting setup
- Launch communication plan
- Post-launch support plan

Deliverables:

- Launch checklist completion
- Redirect mapping document
- Monitoring dashboard setup

- Launch announcement materials
- Post-launch support schedule

Phase 7: Launch and Post-Launch Optimization (Week 27+)

Activities:

- Website launch
- Monitoring for technical issues
- Performance monitoring (Core Web Vitals, uptime)
- Analytics review and optimization
- A/B testing implementation for key CTAs
- Content performance analysis
- User feedback collection
- Iterative improvements based on data

Deliverables:

- Live website
- Post-launch performance reports (weekly for first month)
- A/B test results and recommendations
- Content performance dashboard
- Ongoing optimization roadmap

Success Metrics and KPIs

Performance Metrics

Metric	Baseline	Target (6 months)
Lighthouse Performance Score (Desktop)	TBD	90+
Lighthouse Performance Score (Mobile)	TBD	80+
Largest Contentful Paint (LCP)	TBD	< 2.5s
Cumulative Layout Shift (CLS)	TBD	< 0.1
Interaction to Next Paint (INP)	TBD	< 200ms
Average Page Load Time	TBD	< 3s

Table 8: Performance metric targets

Traffic and Engagement Metrics

Metric	Baseline	Target (6 months)
Organic Search Traffic	TBD	+50%
Total Website Visitors	TBD	+40%
Average Session Duration	TBD	+25%
Bounce Rate	TBD	-20%
Pages per Session	TBD	+30%
Insights Content Pageviews	TBD	+100%

Table 9: Traffic and engagement metric targets

Conversion Metrics

\begin{table}

Metric	Baseline	Target (6 months)
Consultation Requests (per month)	TBD	+60%
Content Downloads (per month)	TBD	+80%
Webinar Registrations (per month)	TBD	+50%
Newsletter Subscribers (total)	TBD	+200%
Conversion Rate (overall)	TBD	+40%

\end{table>

SEO Metrics

\begin{table}

Metric	Baseline	Target (6 months)
Keywords Ranking in Top 10	TBD	+100%
Domain Authority	TBD	+5 points
Indexed Pages	TBD	+150%
Backlinks	TBD	+50%
Click-Through Rate (SERP)	TBD	+25%

\end{table>

Content Metrics

\begin{table}

Metric	Target (Year 1)
Total Published Insights	50+ pieces
Case Studies Published	12+ stories
Webinars Conducted	12+ sessions
Gated Content Assets	10+ downloads
Newsletter Cadence	Weekly or bi-weekly

\end{table>

Risk Management

Technical Risks

Risk	Likelihood	Impact	Mitigation
CMS migration data loss	Low	High	Thorough backup strategy, phased migration, extensive testing
Performance degradation on launch	Medium	High	Performance testing throughout development, CDN setup, optimization sprints
Integration failures with CRM	Medium	Medium	Early integration testing, vendor support engagement, fallback manual processes
Browser compatibility issues	Medium	Medium	Cross-browser testing from early design phase, progressive enhancement approach
Security vulnerabilities	Low	High	Security audit pre-launch, regular dependency updates, CSP implementation

Table 10: Technical risk assessment and mitigation strategies

Project Risks

Risk	Likelihood	Impact	Mitigation
Scope creep and timeline delays	High	High	Clear change control process, phased approach with MVP focus, regular stakeholder alignment
Content creation bottlenecks	High	Medium	Early content planning, external writer support, content templates and guidelines
Stakeholder alignment challenges	Medium	Medium	Regular review sessions, clear approval processes, documented requirements
Resource availability constraints	Medium	High	Early resource allocation, backup resources identified, phased delivery approach
Budget overruns	Medium	High	Detailed budget with contingency, regular budget tracking, prioritized feature list

Table 11: Project risk assessment and mitigation strategies

Business Risks

Risk	Likelihood	Impact	Mitigation
Temporary SEO ranking drops during migration	High	Medium	301 redirects, maintain URL structure where possible, XML sitemap updates, search engine notification
User confusion with new IA	Medium	Medium	User testing pre-launch, clear navigation, search functionality, guided tours for key personas
Low initial content engagement	Medium	Medium	Strong promotion strategy, LinkedIn distribution, sales team enablement, paid promotion budget
Competitive response	Low	Low	Continuous monitoring, agile content strategy, focus on unique value proposition

Table 12: Business risk assessment and mitigation strategies

Appendices

Appendix A: Competitive Benchmark Summary

Based on research of enterprise consulting and SAP-focused firms, key competitive benchmarks include[1][2][3]:

Navigation Patterns:

- 6-7 top-level navigation items (Solutions, Industries, Insights, Case Studies, Partners, Company, Careers)
- Mega menus exposing deep hierarchies
- Persistent "Contact" or "Let's talk" CTAs

Content Organization:

- Solutions organized by business outcomes, not just technology
- Industry-specific landing pages with tailored value propositions
- Centralized, filterable insights libraries
- Searchable case study repositories
- Prominent partner ecosystem sections

Trust Signals:

- Analyst recognitions (Gartner, IDC, ISG MarketScape)
- SAP partner badges and awards
- Client logo walls segmented by industry
- Quantified outcomes in case studies

Visual Design:

- Deep brand colors (navy, charcoal) with bright accent colors
- Large type scales (48-64px hero headlines)
- Generous whitespace and modular grids
- Subtle motion and micro-interactions
- High-quality photography and custom illustrations

AI Positioning:

- AI framed as embedded, trustworthy, and outcomes-focused
- Emphasis on data quality, governance, and domain specificity
- Concrete use cases and ROI examples

- AI strategy and implementation services alongside technology

Appendix B: User Journey Maps

CFO Journey: Evaluating SAP Finance Modernization

1. **Awareness**: CFO reads article on LinkedIn about IFRS 17 compliance challenges
2. **Initial Visit**: Clicks through to Noshtek Insights article on IFRS 17 implementation
3. **Exploration**: Browses Insurance industry page, views related case study
4. **Consideration**: Downloads whitepaper "IFRS 17 Implementation Guide for Insurers"
5. **Evaluation**: Attends webinar on SAP FPSL and regulatory compliance
6. **Decision**: Requests consultation via "Talk to an Expert" CTA
7. **Engagement**: Schedules 30-minute assessment call with Noshtek specialist

CIO Journey: Researching SAP S/4HANA Migration

1. **Awareness**: Searches "SAP S/4HANA finance migration utilities" in Google
2. **Initial Visit**: Lands on Noshtek Utilities industry page from organic search
3. **Exploration**: Reviews S/4HANA Finance solution page, notes clean core approach
4. **Consideration**: Views case study of utility company S/4HANA implementation
5. **Evaluation**: Subscribes to newsletter, receives curated technical insights
6. **Comparison**: Returns to site multiple times, reviews Partner page for SAP credentials
7. **Decision**: Requests consultation via form, mentions specific SAP products of interest
8. **Engagement**: Attends custom demo and technical workshop

Appendix C: Content Taxonomy Reference

Solution Categories:

- Financial Transformation with SAP
- Intelligent Revenue and Billing
- Profitability and Performance
- AI for SAP Finance

Industries:

- Insurance
- Utilities
- Telecom

SAP Products:

- SAP S/4HANA Finance
- SAP Central Finance
- SAP BRIM
- SAP FI-CA / FS-CD
- SAP PaPM
- SAP FPSL / TRM
- SAP Analytics Cloud
- SAP BW/4HANA
- SAP Business Technology Platform (BTP)

Topics:

- AI and Machine Learning
- Financial Close and Consolidation
- Billing and Revenue Management
- Profitability Modeling
- Regulatory Compliance (IFRS 17, BEPS 2.0, ESG)
- Treasury and Risk
- S/4HANA Migration
- Cloud Transformation
- Data Analytics and BI

Content Formats:

- Article

- Report / Whitepaper
- Case Study
- Webinar (Live)
- Webinar (On-Demand)
- Event
- Guide / Checklist
- Infographic
- Video

Appendix D: Technology Stack Decision Matrix

Evaluation Criteria	**Astro + Contentful**	**Next.js + Sanity**	**Webflow**
Performance (Core Web Vitals)	Excellent	Good	Good
SEO Control	Excellent	Excellent	Good
Scalability	Excellent	Excellent	Moderate
Content Management UX	Excellent	Excellent	Good
Developer Experience	Good	Excellent	Limited
Enterprise Governance	Excellent	Good	Moderate
Custom Integrations	Good	Excellent	Limited
Total Cost of Ownership	Moderate	Moderate	Low-Moderate
Maintenance Overhead	Low	Low-Moderate	Very Low
Recommendation	**Primary**	**Alternative**	**Fallback**

Table 13: Technology stack evaluation for Noshtek requirements

Rationale for Astro + Contentful:

- Superior performance for content-heavy marketing site (2-3x faster than Next.js on static content)[7][8]
- Enterprise-grade CMS with excellent governance and multi-region support[9]
- Proven at scale with global consulting and B2B firms

- Strong developer ecosystem and documentation
- Future-proof architecture for AI-enhanced experiences
